The Aberdeen Area Perinatal Infant Mortality Review Committee

Presented by: CDR Rodney Cuny, MD
Chief Medical Officer
Aberdeen Area Indian Health Service
Background

- The Aberdeen Area Indian Health Service serves the four state area of North Dakota, South Dakota, Nebraska and Iowa. A Perinatal Infant Mortality Review (PIMR) Committee sponsored by the Office of Women’s Health has been established by the Indian Health Service to review perinatal and infant deaths that occur within this four state region. This committee has been functioning for over 20 years.
Mission

- The Aberdeen Area Perinatal Infant Mortality Review Committees mission is to decrease perinatal and infant deaths throughout our area
Objectives of the Committee

- To examine significant social, economic, cultural, safety and health system factors associated with infant mortality through review of individual cases

- To identify causes of infant death and action plans for decreasing infant mortality and health disparities associated with infant mortality

- To engage community members in the implementation of community based policies and interventions to combat infant mortality
Members of the PIMR

- Interdisciplinary team that consist of physicians, scientists, advanced practice nurses, pathologists, public health nurses and community representatives. Individuals from Indian Health Service, local community and nationwide represented.

Leading individual causes of American Indian infant deaths, South Dakota, 2000-2009

- SIDS, R95: 57
- Extreme immaturity, P072, <28 wks: 18
- Ill-defined and unspecified, R99: 14
- Accidental suffication & strangulation, W75: 11
- Newborn affected with chorioamnionitis, P027: 7
- Other preterm infants, P073: 6
- Congenital malformation of the heart, Q249: 6
- Other specified general symptoms & signs, R688: 5
- Bronchopneumonia, unspecified, J180: 4
- Anencephaly, Q000: 4
- Holoprosencephaly, Q042: 4

Adopted from Tribal Presentation by Lon Kightlinger, MSPH, PhD
State Epidemiologist
Challenges

- Alcoholism
- Substance abuse
- Overcrowding of homes
- High incidence of teenage pregnancy
- Lack of variety of contraception options due to costs
- Low breastfeeding rates
- Necessity of genetic counseling in rural and remote areas
Strategies to Decrease Mortality

- Preconception Counseling
- Increase public awareness about infant mortality through social networking, text messages and public service announcements
- Increase access to larger variety of contraceptive methods
- Continue to build partnerships with Obstetrical & Pediatric specialist and tertiary care facilities
- The Baby Friendly Hospital Initiative
- Public Health Nursing prenatal and post partum visit on every birth in service unit area
