

Natality

An Overview: 2014

Total Resident Live Births	12,281
Crude Birth Rate per 1,000 Population	14.4
Median Live Birth Weight (Grams)	3,374
Low Weight Births (Less than 2,500 grams)	805
Low Birth Weight Rate per 1,000 Live Births	65.5
Mean Age of Mother	28
No Prenatal Care	0.8%

Resident births increased by less than one percent from 2013 when there were 12,243 births. In 2014, 51.4 percent of the babies born were male and 48.6 percent were female. Racially, white births were 51.3 percent male and 48.7 percent female; American Indian births were 51.1 percent male, 48.9 percent female.

The low birth weight rate per 1,000 live births increased from 62.9 in 2013 to 65.5 in 2014. This was a 4.1 percent increase from the 2013 low birth weight rate.

Starting in 2006, the South Dakota Department of Health implemented the 2003 U.S. Standard Certificate of Live Birth. **Please note education, prenatal care, and tobacco use data are no longer comparable with data years before 2006.** There were 12,281 births to South Dakota residents in 2014, for a crude birth rate of 14.4 per 1,000 South Dakota resident population.

Table 8, below, displays the live births and crude birth rates for the United States and South Dakota for the past 15 years. South Dakota's birth rate remains above the national average as shown in this table.

Table 8
Resident Live Births and Crude Birth Rates,
South Dakota and United States, 2000-2014

Year	United States		South Dakota	
	Number	Crude Rate	Number	Crude Rate
2014	*3,985,924	*12.5	12,281	14.4
2013	3,932,181	12.4	12,243	14.5
2012	3,952,841	12.6	12,092	14.5
2011	3,953,590	12.7	11,834	14.4
2010	3,999,386	13.0	11,795	14.5

Births by Race

Race is assigned based on standards set forth by the National Center for Health Statistics and the US Census Bureau in order for South Dakota's race data to be comparable to other areas. All race data in this section are now categorized in the following manner:

Single-race white
 Single-race American Indian
 Two or more races

The remaining categories (Single-race Black, Single-race Asian, and Single-race

Pacific Islander) are included in the totals, but are not necessarily shown specifically in any tables.

Table 9, below, shows the number and percent of resident births by mother's race since 2005. In 2014, the number of births to whites increased by 0.4 percent, and the number of births for American Indians decreased by 3.4 percent. The number of births to two or more races increased by 12.9 percent and the number of births to other races decreased by 1.1 percent.

Multiple Births

Table 10, below, displays resident multiple births for the last 10 years. The highest number of twins was born in 2008

with 204 sets. The highest number of triplets happened in 2007 with seven sets of triplets born.

Table 10

Marital Status

In 2014, the majority of women who gave birth, 62.3 percent, were married as displayed in Table 11 below. When looking at the data by race, American

Indian women have consistently had the highest percent of births out of wedlock with 84.1 percent in 2014.

Table 11
South Dakota Resident Births Out of Wedlock by Year of Birth and Race, 2005-2014

Year	All Races		White		American Indian		Two or More Races		Other	
	Num	%	Num	%	Num	%	Num	%	Num	%
2014	4,623	37.7	2,440	26.6	1,583	84.1	274	66.5	192	35.9

Birth Weight

Table 12, below, indicates that in 2014 the majority of births fell into the 3,000 to 3,499 gram range. This is consistent with data from the past several years. There were 805 low weight births or 6.6 percent of all South Dakota resident live births in 2014. When looking at race, 6.3 percent of

white babies and 7.0 percent of American Indian babies were low birth weight in 2014. In comparison, in 2013 white and American Indian low birth weight births were 5.9 and 6.8 percent, respectively. Table 12a, on the next page, compares the birth weights of infants for the past 10 years.

Table 13, below, compares the low birth weight babies by race of mother from 2005 to 2014. In 2014, there were 577 or 6.3 percent low birth weight babies born to white women. For American Indian women there were 133 or 7.0 percent.

In 2014, there was a 6.8 percent increase in white low birth weight babies and a 2.9 percent increase in low birth weight babies among American Indians.

Tobacco Use

Table 15, below, displays the percent of mothers who smoked during the past nine years. In 2014, 21.7 percent stated they

smoked three months prior to pregnancy, and 14.8 percent smoked anytime during their pregnancy.

Table 15
South Dakota Resident Live Births by Cigarette Smoking Status, 2006-2014

Year	Mother's Smoking Status				
	Three Months Prior to Pregnancy	First Trimester	Second Trimester	Third Trimester	Anytime During Pregnancy

Table 16, below, displays the percent of mothers who smoked prior to pregnancy for the past nine years by their smoking status during pregnancy. The majority of women

stated they never quit smoking during their pregnancy, however, this decreased from 50.7 percent in 2006 to 44.4 percent in 2014.

Table 16
South Dakota Resident Births to Mothers Who Smoked Prior to Pregnancy by Smoking Status During Pregnancy, 2006-2014

Year	Quit before becoming pregnant	Quit before second trimester	Quit before third trimester	Never quit	Stopped at some point during pregnancy, but started again before giving birth

Mother's Age and Race

Table 17, below, displays that women aged 25 to 29 accounted for the largest percentage of South Dakota resident births in 2014, at 33.9 percent. Women less than 20 years of age comprised 6.0 percent of the total resident births.

The median ages for white, American Indian, and two or more races were 28, 25, and 24 years of age, respectively. The modal ages for the same race groups were 27, 22, and 22 years of age respectively.

Table 18, below, displays South Dakota resident teen births (15 to 17 years old) by race from 2005 to 2014. In 2014, the teen birth rate was 13.2, unchanged from the

2013 rate. When looking at race, the white teen birth rate was 7.4 compared to a teen birth rate of 40.2 for American Indians in 2014.

Table 18

Prenatal Care

Table 19, below, shows the number of South Dakota resident live births by when the mothers started prenatal care in 2014. Seventy-two percent of mothers started care in the first trimester – 78.8 percent of white mothers and 49.5 percent of American

Indian mothers. Overall, less than 1 percent failed to obtain prenatal care at all (0.4 percent of white mothers and 3.4 percent of American Indian mothers).

Payment Type

Table 20, below, displays the number of births by payment type for the past five years. In 2014 the majority of births, 57.1

percent, were paid by private insurance. The second highest payment type was Medicaid with 32.0 percent.

Table 20

Infections Present and/or Treated

Table 22, below, displays resident births by infections present and/or treated during mother's pregnancy for the past five years. The majority of births, 95.6 percent in 2014, had no infections present or treated.

For all five years, chlamydia was the main infection present and/or treated during pregnancy. In 2014, chlamydia infections were present or treated in 2.4 percent of births.

**Table 22
South Dakota Resident Live Births by Infections Present and/or Treated During This Pregnancy and Year of Birth, 2010-2014**

Apgar Score

The Apgar score was developed by the late Virginia Apgar, M.D., as a standardized mechanism to assess the physical condition of newborns. The score considers five easily identifiable characteristics – heart rate, respiratory effort, muscle tone, reflex, and color.

Each characteristic is assessed and assigned a value from zero to two, with two being optimum. If the total score of these five components is seven or greater, a newborn is considered to be in good to excellent physical condition.

In 2014, 1.9 percent of South Dakota resident infants received five minute Apgar scores less than seven.

Considering race, 1.8 percent of white infants, 1.9 percent of American Indian infants, and 1.5 percent of infants with two or more races received a five-minute Apgar score less than seven in 2014.

Characteristics of Labor and Delivery

Table 24, below, lists the characteristics of labor and delivery for the past five years reported on South Dakota resident birth certificates. The four most prevalent characteristics in 2014 were epidural or spinal anesthesia with 53.6 percent,

augmentation of labor with 30.1 percent, antibiotics during labor with 27.9 percent, and induction of labor with 25.7 percent. Overall characteristics of labor and delivery were present in 79.1 percent of resident births in 2014.

Table 24
South Dakota Resident Live Births by
Characteristics of Labor and Delivery and Year of Birth, 2010-2014

	Year of Birth									
	2010		2011		2012		2013		2014

Onset of Labor

Table 26, below, displays the complications associated with the onset of labor for the past five years. The primary complication associated with onset of labor for mothers in

2014 was precipitous labor (< 3 hours). In 2014, 11.6 percent of births had a complication associated with the onset of labor.

Table 26
South Dakota Resident Live Births by Onset of Labor and Year of Birth, 2010-2014

	Year of Birth									
	2010		2011		2012		2013		2014	
	Num	%	Num	%	Num	%	Num	%	Num	%

Note: *According to the National Center for Health Statistics, precipitous labor is comparable with data prior to 2006.

Percentages may sum to more than 100 percent because multiple complications with the onset of labor may be reported for a single birth.

Source: South Dakota Department of Health, Office of Health Statistics

Maternal Complications

Table 27, below, illustrates the maternal complications for the past five years. The highest maternal complication in 2014 was third or fourth degree perineal

laceration with 0.9 percent of births. Overall, maternal complications were present in 1.6 percent of resident births in 2014.

Table 27
South Dakota Resident Live Births by Maternal Complications and Year of Birth, 2010-2014

Methods of Delivery

Table 28, on the next page, displays the method of delivery for the past five years. Vaginal birth was the primary method of delivery for South Dakota residents for the

past five years. Primary C-section was the second largest method of delivery followed by repeat C-section methods.

Table 28
South Dakota Resident Births by Method of Delivery and Year of Birth, 2010-2014

Table 29, below, displays the method of delivery by fetal presentation. The majority of births, 95.1 percent, were cephalic while 3.5 percent were breech.

When looking at primary C-section births, 18.7 percent were breech while 77.7 percent were cephalic.

Abnormal Conditions of the Newborn

Table 30, on the next page, shows abnormal conditions in newborns for the past five years. In 2014, 13.3 percent of South Dakota resident live birth certificates reported abnormal conditions of the

newborn. Overall, NICU admission was the most frequently reported condition in 2014 followed by assisted ventilation required immediately following delivery.

Table 30

South Dakota Resident Live Births by Abnormal Conditions of Newborn and Year of Birth, 2010-2014

	Year of Birth									
	2010		2011		2012		2013		2014	
	Num	%	Num	%	Num	%	Num	%	Num	%
NICU admission	1,045	8.9	1,010	8.5	1,130	9.3	1,189	9.7	1,245	10.1
Assisted ventilation required immediately following delivery	539	4.6	478	4.0	593	4.9	770	6.3	806	6.6
Antibiotics received by the newborn for suspected neonatal sepsis	518	4.4	526	4.4	639	5.3	644	5.3	621	5.1
Assisted ventilation required for more than 6 hrs	253	2.1	202	1.7	238	2.0	290	2.4	258	2.1
Newborn given surfactant replacement therapy	108	0.9	81	0.7	90	0.7	91	0.7	86	0.7
Significant birth injury	24	0.2	14	0.1	21	0.2	15	0.1	13	0.1
Seizure or serious neurologic dysfunction	8	0.1	5	0.0	9	0.1	9	0.1	11	0.1
None of the above	10,490	89.0	10,596	89.6	10,697	88.5	10,725	87.6	10,650	86.7

Note: Percentages may sum to more than 100 percent because multiple abnormal conditions may be reported for a single birth.

Congenital Anomalies

Table 31, below, displays congenital anomalies for the past five years. In 2014 the most prevalent congenital anomaly was

Down syndrome (Trisomy 21). In 2013 the primary congenital anomaly was other craniofacial abnormality.

Table 31

South Dakota Resident Births with Reported Congenital Anomalies and Year of Birth, 2010-2014

	Year of Birth									
	2010		2011		2012		2013		2014	
	Num	%	Num	%	Num	%	Num	%	Num	%
Down syndrome (Trisomy 21)*	16	0.1	17	0.1	13	0.1	15	0.1	17	0.1
Other craniofacial abnormality	7	0.1	13	0.1	11	0.1	22	0.2	16	0.1
Cyanotic congenital heart disease	3	0.0	13	0.1	5	0.0	13	0.1	16	0.1
Cleft lip with or without a cleft palate	19	0.2	12	0.1	10	0.1	16	0.1	14	0.1
Chromosomal disorder	16	0.1	15	0.1	16	0.1	14	0.1	13	0.1
Cleft palate alone	11	0.1	12	0.1	6	0.0	9	0.1	13	0.1
Hypospadias	12	0.1	11	0.1	12	0.1	16	0.1	10	0.1
Congenital diaphragmatic hernia	2	0.0	2	0.0	0	0.0	4	0.0	5	0.0
Gastroschisis	6	0.1	5	0.0	9	0.1	5	0.0	4	0.0
Limb reduction defect	5	0.0	1	0.0	4	0.0	1	0.0	4	0.0
Meningomyelocele/Spina bifida*	3	0.0	3	0.0	4	0.0	1	0.0	3	0.0
Anencephaly*	2	0.0	2	0.0	0	0.0	1	0.0	2	0.0
Omphalacele	3	0.0	1	0.0	0	0.0	1	0.0	2	0.0
At least one anomaly	91	0.8	91	0.8	85	0.7	98	0.8	97	0.8
None of the above	11,699	99.2	11,740	99.2	12,004	99.3	12,139	99.2	12,178	99.2

Note: *According to the NCHS, Down syndrome, meningomyelocele/spina bifida, and anencephaly are comparable with data prior to 2006.

Percentages may sum to more than 100 percent because multiple congenital anomalies may be reported for a single birth.
