RECOMMENDATIONS for Temporary Exclusion from a CHILD CARE SETTING

Children should be excluded from a child care setting for the following conditions:

- Illness that prevents the child from participating comfortably in program activities.
- Illness that results in a greater need for care than the staff can provide without compromising the health and safety of other children.
- Fever, lethargy, irritability, persistent crying, difficult breathing and/or other manifestations of possible severe illness.
- Persistent abdominal pain (continuous for more than two hours) or intermittent abdominal pain associated with fever, dehydration, or other systemic signs or symptoms.
- Chickenpox (Varicella): exclude until all lesions have dried and crusted or, in immunized children without crusts, until no new lesions appear within a 24-hour period.
- Diarrhea: exclude if
  - stool not contained in diaper
  - fecal accidents occur in a child normally continent
  - stool frequency exceeds two or more stools above normal for that child
  - stool contains blood or mucus
- E. coli, shiga toxin-producing (STEC): exclude until diarrhea resolves and two stool cultures are negative.
- Haemophilus influenzae type B, invasive (Hib): exclude until after 24 hours of antibiotic treatment.
- Head lice (Pediculosis): refer for treatment at end of program day and readmit on completion of first treatment.
- Hepatitis A: exclude until one week after onset of illness.
- Impetigo (Streptococcal infection of the skin): exclude until after 24 hours of antibiotic treatment.
- Influenza and Influenza-like illness: exclude as long as fever ≥100 degrees Fahrenheit is present in an unmedicated state. Additional exclusions may be necessary for documented novel strain or pandemic influenza based on state or federal guidance.
- Measles: exclude until 4 days after onset of rash.
- Meningococcal disease (Neisseria meningitidis): exclude until after 24 hours of antibiotic treatment.
- Methicillin-resistant Staphylococcus aureus (MRSA): exclude until after 24 hours of antibiotic treatment.
- Pertussis (Whooping cough): exclude until completion of 5 days of recommended course of antibiotic treatment. If appropriate antibiotic treatment is not received, exclude until 21 days after onset of symptoms.
- Rash (with fever or behavior change): exclude until a physician has determined it is not a communicable disease.
- Rubella: exclude until 7 days after onset of rash.
- Strep throat (Streptococcal pharyngitis): exclude until after 24 hours of antibiotic treatment.
- Tuberculosis: exclude until a physician, concurring with the SD Department of Health, states the child is not infectious.
- Vomiting: exclude if vomiting occurs two or more times in 24 hours, unless the vomiting is determined to be caused by a non-communicable condition and the child is not in danger of dehydration.

If you have questions about infectious diseases or immunizations, contact the Department of Health or your physician.
