COVID19 Vaccine Finder Updates

VF to send out registrations to remaining S.D. sites this week

Onboarding emails will come from: vaccinefinder@auth.castlighthealth.com (check your spam folder)

If don’t receive e-mail by Friday contact: eocevent522@cdc.gov

Not intended for press or for reporting purposes.
VF Question

Q: Does Vaccine Finder include inventory for both 1st and 2nd doses that we have on-hand?

A: Yes, please report inventory for both first and second doses on hand. There is no distinction between first or second doses in the system though, so (for example) all Pfizer doses would be logged under the Pfizer NDC regardless of if they are earmarked as first or second dose. If a provider has 100 first doses and 200 second doses, they would just report 300 doses for that day.

Q: How does the use of monoclonal antibodies to treat symptomatic COVID-19 affect the scheduling of mRNA COVID vaccination?

A: There are no data on the effect of passive antibody therapies, including monoclonal antibodies and convalescent plasma, on the effectiveness of vaccination with mRNA COVID-19 vaccines. As a precautionary measure, CDC recommends waiting at least 90 days after receipt of passive antibody therapy for COVID-19 illness before initiating the COVID-19 vaccine series. Individuals who develop COVID-19 illness after the first COVID-19 vaccination and receive passive antibody therapy should wait 90 days after antibody therapy to receive dose 2. There is no maximum interval between vaccine doses and there is no need to restart the vaccination series.
