

COVID-19 Cases and Outcomes from June 1, 2021 to December 31, 2021

Persons aged 12 years and older

	Boostered	Fully Vaccinated	Partially vaccinated	Un-Vaccinated	Total	Boostered Population	Fully Vaccinated Population	Partially Vaccinated Population (1-dose)	Un-Vaccinated Population	Boostered Rate	Fully Vaccinated Rate	Partially Vaccinated Rate	Un-Vaccinated Rate
Cases	1,416	13,097	2,764	33,032	52,251	170,395	248,525	52,209	421,588	831	5,270	5,294	7,835
Hospitalizations	74	575	110	1,857	2,769	170,395	248,525	52,209	421,588	43	231	211	440
Deaths	23	152	26	401	592	170,395	248,525	52,209	421,588	13	61	50	95

- People (12+ years) who received a booster dose had lower rates of cases, hospitalization, and death compared to unvaccinated.
- People who were not boosted, but had received 1 or more doses, had lower rates of cases, hospitalization, and death compared to unvaccinated.
- Persons who received 1 or more doses of vaccine, whether receiving 1 dose or fully vaccinated, had similar rates of COVID-19 cases, hospitalizations, and deaths.
- Compared to persons who had received a booster dose of COVID-19, unvaccinated had:
  - **9.4-times higher rate of being a case of COVID-19**
  - **10.2-times higher rate of being hospitalized with COVID-19**
  - **7.3-times higher rate of dying with COVID-19**
