- **Special Situation**

- WHAT HAPPENED?!?!? (cont.)
 - PCP staff entered historical COVID dose into electronic medical record system with reported date 12/30/20.
 - HL7 interface did not recognize a matching existing dose, so it added a new dose.
 - In this case the dose added by clinic staff was not the correct brand, creating a duplicate that does not match

RECOMMEND

• *Special Situation*

- WHAT HAPPENED?!?!? (cont.)
 - Pharmacy staff did not enter the vaccine dose until the following day, 12/31/20, and did not change the actual vaccination date of the dose.
 - COVID-19-PFI interfaced into patient's SDIIS record, adding to the inaccurate dose that had been previously uploaded.
- Moral of the Story:
 - Pharmacy: enter shots into your system as soon as possible, before reporting to PCP
 - PCP staff: check SDIIS to ensure the shot is there. If your historical entry matches the existing shot, your interface will not overwrite the existing shot. Also, use your reconciliation feature rather than add the shot manually.
