Protect yourself and your baby from COVID-19. Get vaccinated.

+ **Pregnant and recently pregnant women** are more likely to get severely ill with COVID-19 compared with non-pregnant women.

+ Getting a COVID-19 vaccine can protect you from severe illness from COVID-19.

+ Staying **up to date** with COVID-19 vaccination is recommended for women who are pregnant, breastfeeding, trying to get pregnant now, or might become pregnant in the future, including getting a COVID-19 booster shot when it’s time.

+ There is no evidence that fertility problems are a side effect of any COVID-19 vaccine.

+ The benefits of receiving a COVID-19 vaccine outweigh any known or potential risks of vaccination during pregnancy.

+ **COVID-19 vaccination during pregnancy** builds antibodies that might protect the baby. Antibodies made after a pregnant woman received an mRNA COVID-19 vaccine were found in umbilical cord blood.

**Ask your provider about the COVID-19 vaccine.**
