VACCINATION RATES
NATIONALLY

IN SD,
1 IN 2 ADOLESCENTS
ARE UP-TO-DATE ON THE
HPV VACCINE SERIES

THERE'S A VACCINE FOR CANCER

IS YOUR CHILD PROTECTED?

1

HPV VACCINE IS CANCER PREVENTION

HPV vaccine protects against HPV types that most commonly cause anal, cervical, throat/tonsil, penile, vaginal, and vulvar cancers.

MOST OF THESE CANCERS CAN BE PREVENTED BY HPV VACCINE

2

HPV VACCINE IS RECOMMENDED AT THE SAME TIME AS OTHER ADOLESCENT VACCINES

Recommended vaccines for adolescents:

- TDAP
- HPV
- MENINGOCOCCAL

3

HPV VACCINE IS BEST FOR BOYS AND GIRLS AGED 11-12 YEARS

The vaccine produces better immunity to fight infection when given at a younger age.

If not previously vaccinated, males and females may be vaccinated through age 26.

HPV VACCINE IS CANCER PREVENTION

Talk to your doctor about vaccinating your 11–12 year old sons and daughters against HPV.
