Children’s Oral Health

**Definition:** *Children, ages 1-17, who have not visited a dentist or dental clinic for any reason within the past year.*

**Prevalence of Children’s Oral Health**

- South Dakota 16%
- There is no nationwide median for children, ages 1-17, who haven’t been to the dentist in the past year

**Healthy People 2020 Objective**

There was no comparable Healthy People 2020 Objective for children, ages 1-17, who haven’t been to the dentist in the past year.

Children, Ages 1-17, Who Have Not Visited a Dentist or Dental Clinic for Any Reason within the Past Year, 2000, 2001, 2003, 2005, 2007, and 2009

[Graph showing data from 2000 to 2009]

**Figure 53**
Children, Ages 1-17, Who Have Not Visited a Dentist or Dental Clinic for Any Reason within the Past Year, 2011

[Graph showing data for 2011 to 2015]

Note: Beginning in 2011, the CDC began using a different methodology to weight the data, therefore current data estimates cannot be compared to previous years.

Figure 54, below, shows the length of time since the respondents’ children, ages 1 to 17 years old, had been to a dentist or a dental clinic. The majority of children in 2011 had been to a dentist or dental clinic within the past year.

**Figure 54**
Length of Time Since Child Visited the Dentist or Dental Clinic, 2011

Figure 55, below, displays the length of time since the child visited the dentist or dental clinic by age. When looking at the 1 to 4 year old age group, 41 percent have never been to the dentist compared to the three other age groups who all had fewer than 3 percent who had never seen a dentist.

**Figure 55**
Length of Time Since Child Visited the Dentist or Dental Clinic by Child’s Age, 2011

The main reason why children ages 1 to 17 had not visited the dentist within the past year was because they had no reason to go, i.e. no problems, no teeth, as shown below in Table 38. Thirteen percent stated that cost was the reason why they had not visited a dentist within the past year.
